led lighting

In partnership with LED manufacturers, EcoReps is able to offer professional assessment, supply and installation of commercial and industrial LED lighting systems. With projects in USA, Japan, Taiwan, China and Australia, EcoReps can provide LED lighting systems for airports, shopping centres, street lighting, highway industrial lighting, parklands and sports fields.

pyrolysis

In just 1 hour, a Thermal Recovery Unit (TRU) can gasify up to 2 tonnes of organic waste, including tyres and plastics, as well as medical, municipal and green waste, reducing your waste stream by up to 95%. This process produces Biochar, useful in soil rejuvenation and enough SynGas to power up to 1800 homes with an attached thermal generator.

organic innovation

Culture Clear is a scientifically enhanced probiotic which works by acting on undesirable pathogens, bacteria and algae in aquatic environments. It increases the dissolved oxygen levels improving the health of the water, balancing the pH and reducing odour. Applications include farms, golf courses and waste ponds and is 100% safe for human and animal consumption.
